South River Technologies Releases Titan FTP Server Version 3.0

Annapolis, MD - February 17, 2004 - South River Technologies, a leading developer of Internet Utilities for file transfer and collaboration, announced today the release of version 3.0 of their Titan FTP Server software. Titan FTP Server is an enterprise class server product for storing and sharing files.

The new version adds support for SFTP, an FTP-like protocol that offers both increased performance and security. Additional security features have also been added. The server offers personal, professional and enterprise versions, to suit the needs of the small, departmental application to the largest enterprise implementations.

"The addition of the SFTP protocol is another example of our continued commitment to respond to customer needs" said Michael Ryan, Co-founder and CEO for South River Technologies. "Security is increasingly on the minds of all computer users, and we received many requests for supporting the protocol."

Titan is the first commercially available FTP server for Windows® to also support the SFTP protocol, giving users the option of using either or both protocols from the same server.

About South River Technologies

Founded in 1996, South River Technologies develops file management software which is used for file collaboration, shared access and website management. All SRT products include strong security to provide encrypted data transfer. This unique client technology, commercially available as WebDrive®, integrates into the Windows environment, creating an instantly familiar interface for the end user, reducing training and support costs. This technology is also licensed to independent software vendors to add functionality to existing product suites. ISPs can also license re-branded versions of our products as an add-on to their service offerings.
