Newly Released Titan FTP Server® 5.0 Provides Businesses Greater Control

Event Handler System Facilitates Business Logic

Annapolis, MD – November 1, 2005 – Continuing to pursue their commitment to high customer satisfaction, South River Technologies today announced the release of version 5.0 of their Titan FTP Server. Titan is an enterprise class, secure server that gives users the ability to store electronic files and obtain those files securely over the Internet.

The new release includes an Event Handling system that allows the administrator to control the processing of events taking place on the server. The administrator can instruct Titan to send an email to a designated user when new files are posted to the server. Users can be notified automatically when their account is about to expire and administrators can be notified each time the server is activated.

The release also includes the ability for shared attributes, such as access permissions, to be set at the server, group or user level. This reduces time needed for server configuration and provides better organization. Home directories can also be set at the group or user level. In addition, the administrator can quickly support users within a company domain by using Titan's NT Active Directory support.

About South River Technologies

Founded in 1996, South River Technologies develops file management software for file collaboration, shared access and website management. The SRT family of products provides strong security for encrypted data transfer. SRT's unique client technology, commercially available as WebDrive®, integrates into the Windows environment, creating an instantly familiar interface for users -- ultimately reducing training and support costs. Independent software vendors license SRT technology to offer added functionality to existing product suites. For more information, visit www.SouthRiverTechnologies.com
