**Federal Aviation Administration Purchases File Collaboration Software from  
South River Technologies**

*GroupDrive Increases Network Security by Eliminating the Need for FAA Employees to  
Email Mission-Critical Files*

**ANNAPOLIS, Md.—July 31, 2007**—South River Technologies, Inc., an innovator in managed file transfer and collaboration software, today announced the Federal Aviation Administration (FAA) has purchased its enterprise level file sharing and collaboration product GroupDrive 5.0. The FAA plans to rollout GroupDrive 5.0 to nearly 1,000 users in the coming months. The implementation will include six GroupDrive enterprise servers located throughout the United States.

By implementing GroupDrive 5.0 FAA employees will be able to quickly and securely share mission critical files and collaborate on documents in realtime and eliminate potential security risks with sending files as email attachments. FAA employees will have realtime access to the most current version of any document. Draft versions of documents can be temporarily shared with a broader group, and then final versions may be restricted to a limited group based upon user-defined criteria. In-place editing of the server-based files has further added to user productivity.

“SRT is proud to provide the FAA with the industry’s most robust and secure collaboration solution that is a cost effective means to eliminating data overload,” said Michael Ryan, CEO and co-founder of South River Technologies, Inc. “Basic content services such as GroupDrive enable government agencies to avoid the confusion created when deploying enterprise content management solutions that have more functionality than is needed to simply manage and collaborate on documents.”

**About South River Technologies**

South River Technologies is an innovator in secure file management and collaboration software. The company’s software allows users to access, manage and share files over the Internet in order to automate and streamline business processes and enhance productivity. SRT’s products enhance customers’ existing applications by instantly enabling secure access and Internet file sharing within those applications. More than 55,000 customers in over 110 countries use SRT’s software to make remote file access and collaboration more efficient for their customers, partners and distributed workforce.
